DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to method of collecting and aggregating telecommunications data, classified in class 705 subclass 01.
- II. Claims 9-15, drawn to method and system of enhancing telecommunications infrastructure for a building, classified in class 705, subclass 01.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the invention of group I is directed to method of collecting and aggregating telecommunications data by collecting and aggregating telecommunication demand information and distributing the aggregated information to the members, while invention of group II is directed to method and system of enhancing telecommunications infrastructure by assigning a member status, and connecting a telecommunication path between a member and potential customer.

Because these inventions are independent or distinct for the reasons given above, because the search required for Group I, is not necessarily required for Groups II due to their different scope and subject, and vice versa, restriction for examination purposes as indicated is proper since it's a serious burden for the examiner to examine all of these amended claims.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention, either group I or II, to be examined even though the requirement be traversed (37 CFR 1.143).
